

## 1996 Plant Back Restrictions for a Potato Crop Following Application of a Registered Field Corn or Soybean Herbicide

B. A. Michaelis, L.K. Binning and R.L. Hughes

Department of Horticulture

University of Wisconsin

The following list is intended to be used as a guide in providing follow crop information for potatoes after the application of corn and soybean herbicides. ***Because of various environmental and agronomic factors, all risks involving herbicide carryover cannot be absolutely eliminated by following the recommendations listed here.*** When doubt exists regarding carryover, it is a good idea to conduct a field bioassay the season before planting the follow crop. A successful field bioassay involves growing to maturity a test strip of the crop crossing the entire field, including knolls and low areas. Some of the information summarized here is based on 1995 labels and may no longer be valid. Labels change, therefore have a current label in your possession and always read and follow the directions it contains. If questions still exist, contact the manufacturer for clarification.

Herbicides listed in the table may or may not be labeled for use on field corn or soybeans in Wisconsin.

Potatoes following Field Corn and Soybeans ROTATIONAL CROP RESTRICTIONS - 1996					
Pesticide	Company	Class	Corn	Sybn	Time Period
AAtrex 4L	Ciba	H	✓		2 growing seasons
AAtrex Nine-O	Ciba	H	✓		2 growing seasons
Accent	Du Pont	H	✓		10 -18 months
Assure II	Du Pont	H		✓	120 days
Banvel	Sandoz	H	✓		Following treated crops normal harvest
Basagran	BASF	H	✓	✓	0 days
Basis	Du Pont	H	✓		4 months
Battalion	Monsanto	H	✓		2 growing seasons
Beacon	Ciba	H	✓		18 months
Bicep	Ciba	H	✓		2 growing seasons
Bicep II	Ciba	H	✓		2 growing seasons
Bicep Lite	Ciba	H	✓		2 growing seasons
Bladex 4L	Du Pont	H	✓		Fall or spring following application
Bladex 90DF	Du Pont	H	✓		Fall or spring following application
Blazer	BASF	H		✓	18 months
Broadstrike + Dual	DowElanco	H	✓	✓	12 months
Broadstrike Plus Corn PRE/PPI	DowElanco	H	✓		12 months
